

SPEED BLOCK™

CHANGING THE FACE OF CONSTRUCTION.

ONE BLOCK FITS ALL

SpeedBlock is rapidly becoming a material of choice for contractors, developers and builders throughout central California and Nevada. It's flexibility and unique qualities make it an ideal material for applications including:

Retail Buildings

Warehouses

Big Box Stores

Institutions

Office Buildings

Residential

BUILT ON 40 YEARS OF CONCRETE EXPERIENCE.

SpeedBlock is a new patented automated manufacturing process that efficiently produces large format structural concrete masonry units.

With this new process, builders can have their project walls completely cast and cut to exact specifications, all with substantial savings. By eliminating on-site casting and cutting, labor costs can be reduced by up to 80%, and virtually eliminate cleanup.

WE'RE SETTING THE PACE FOR A WHOLE NEW TYPE OF BUILD, AS A LARGE FORMAT CMU.

With SpeedBlock, structural walls have never gone up faster. As the revolutionary new large format, structural hollow concrete masonry unit (CMU), build times and labor costs can be reduced by up to 80% when compared to traditional hand build block techniques.

Produced in 24 foot lengths x 32 inch blocks, at either 6, 8 or 12 inch widths, one SpeedBlock is the equivalent of 72 traditional CMU. With an average of only 10 to 15 minutes to lift, place and secure one SpeedBlock block, you can easily see significant savings in time and labor as your structural walls go up in record times.

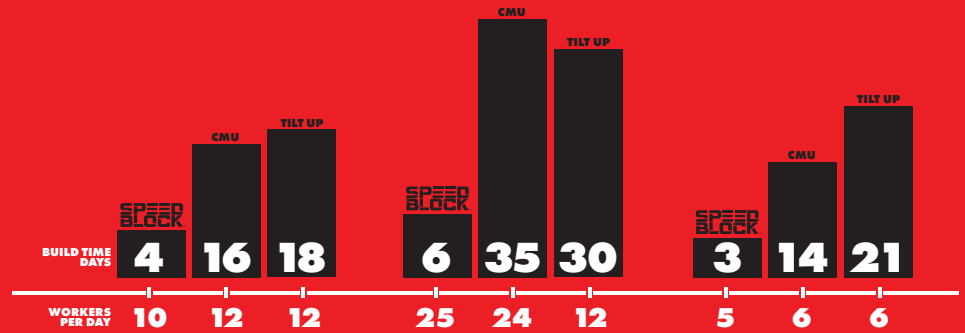

SMALL WAREHOUSE

LARGE WAREHOUSE

SMALL OFFICE

TAKE A CLOSE LOOK AT THE SAVINGS.

Regardless of building type, SpeedBlock can shave weeks or months off your next project. Walls can go up in hours or days, with smaller crews and less physical fatigue.

WHY SPEEDBLOCK IS RIGHT FOR YOUR NEXT PROJECT.

As a large format CMU, SpeedBlock is designed and manufactured with the goal of providing superior structural wall construction, up to 3X stronger than hand block-by-block build, in record times.

At a time when there are labor shortages, ongoing physical strains with masons and projects that need to be completed faster, SpeedBlock delivers a new path to better building.

Our goal is to make every project go smoothly, by doing as much prep work as possible:

- Block is pre-manufactured using our proprietary wet cast manufacturing process.
- Block is cast and precut in our facilities, eliminating cutting and waste at your build site.
- SpeedBlock can be manufactured in different finishes and colors.
- Pre-delivered lengths allows you to install in any weather condition.
- Additionally, the structural wall can be 300% stronger than traditional CMU construction.

The SpeedBlock process is a game changer.

Call us today and find out how you can save precious time, labor and keep your projects on schedule and budget.

SIX POINT PROCESS DRIVES EFFICIENCIES.

Our prep and processes will ensure your projects move forward with SpeedBlock efficiencies.

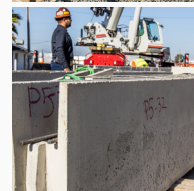

1. CONVERSION

Your building plans get converted to show SpeedBlock placement.

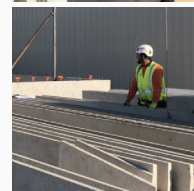

2. MANUFACTURING

Block is cast and cut to your precise specifications.

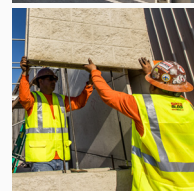

3. LABELING

Each block is labeled to coincide with your building plan.

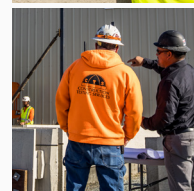

4. DELIVERY

Everything is cut, marked and ready for installation.

5. LIFT + INSTALL

Via crane or forklift, your blocks can be lifted into place and secured.

6. INSPECTION

We provide an 8 x 8 x 16 inch block for CMU inspection.
